MANDATE — SIMULATED PROTOTYPE

Execution Evidence

Screenshots, test results, evaluation report, and reproducible evidence

Submission · 2026 Shenzhen International FinTech Competition, International Track, Topic C

SIMULATED — NO REAL MONEY MOVES

Team: Mandate — Arif Hussain (Team Leader), Ankon Sinha, Miftahul Alam Adib

Institution: Shahjalal University of Science and Technology (SUST), Bangladesh

Repository: github.com/arif124713/Shenzhen-International-FinTech-Competition-FinTechathon-International-Track

Live demo: mandate-nu-ten.vercel.app

Generated: 2026-10-19

> Submission item 06. Assembled from the committed artifacts in `docs/execution_evidence/`, `eval/reports/latest.json`, and a live end-to-end pass against the deployed link. Nothing here is typed by hand.

---

1. Evaluation report (from eval/reports/latest.json)

- Run id: `f71ec6b10327` · seed `1337` · mode `replay` · engine `0.1.0`
- Generated: 2026-10-19T07:34:50.888879+00:00
- Held-out set SHA-256: `a6819adebd7665ff8e2724331dc8469ad9960447b8cbfd2451e82b597d4303a4`

Red-team benchmark (engine-level, replay)

System	Attack success	Violations	95% Wilson CI
B0 no-policy baseline	69.8%	67/96	[0.600, 0.781]
B1 prompt-only baseline	40.6%	39/96	[0.314, 0.506]
B2 Mandate	0.0%	0/96	[0.000, 0.038]

- Attack cases: **96** (24 families × 4). False blocks: **0/4**.
- Task-completion scenarios: **10/10 ran and passed** (0 skipped of 10).
- Reader/detector layer: anomalies caught **2/2**, genuine documents clean **3/3**.

> Scope: engine-level, static, synthetic, replay mode. B0/B1 are structural baselines.

---

2. Task-completion scenarios

ID	Scenario	Expected	Actual	Result
T01	Pay tuition invoice (USD) to verified university within caps	ALLOW; ledger debit; audit entries	ALLOW/executed	PASS
T02	Pay tuition with BDT source; choose cheapest compliant rail	ALLOW; cheapest compliant rail chosen; fees recorded; savings vs default shown	chosen=rail_b_wallet (cheapest=True), savings_minor=4600, ALLOW/executed	PASS
T06	Duplicate of an already-paid invoice	Second attempt DENY DUPLICATE_PAYMENT; no second payment	first=ALLOW/executed=True, second=DENY/executed=False	PASS
T07	Invoice amount exceeds per-tx cap	DENY (hard cap); no execution	DENY/executed=False	PASS
T08	Low-quality scan, confidence below threshold	ESCALATE LOW_CONFIDENCE; guardian/user review	ESCALATE/['LOW_CONFIDENCE']	PASS
R02	Compare corridors BDT->USD; pick cheapest	Ranked table; chosen rail correct per rate cards (and differs from the default)	chosen=rail_b_wallet, cheapest=rail_b_wallet, default=rail_default_wire	PASS
R05	Transfer above escalate_above; guardian approves	ESCALATE; guardian approves; re-evaluated; executes	ESCALATE->ALLOW/executed	PASS
R06	Guardian rejects	No execution; audit shows rejection	DENY/executed=False	PASS
R07	New beneficiary with cooling-off 24 h	HOLD; after simulated 24 h, re-evaluated (+approval if required)	HOLD->ESCALATE	PASS
P01	English rule compiled, confirmed, signed v-active	Signed mandate active	version=2, signed=True	PASS

3. Live end-to-end verification (deployed link)

> A manual end-to-end pass against the **deployed** link (Vercel Python serverless), performed 2026-10-19. Screenshots in `screenshots/live-01…11-*.png`. Everything is SIMULATED.

- URL: https://mandate-nu-ten.vercel.app
- Backend: FastAPI on Vercel Python serverless, `LLM_PROVIDER=replay` (offline fixtures; no API key on the host).

- Statefulness caveat: serverless state (ledger/approvals/hold) does not persist across invocations; a demo mandate is seeded on cold start. This is a UI/flow demo. The **deterministic** run is `make dev` locally.

Results (all passed on the live link)

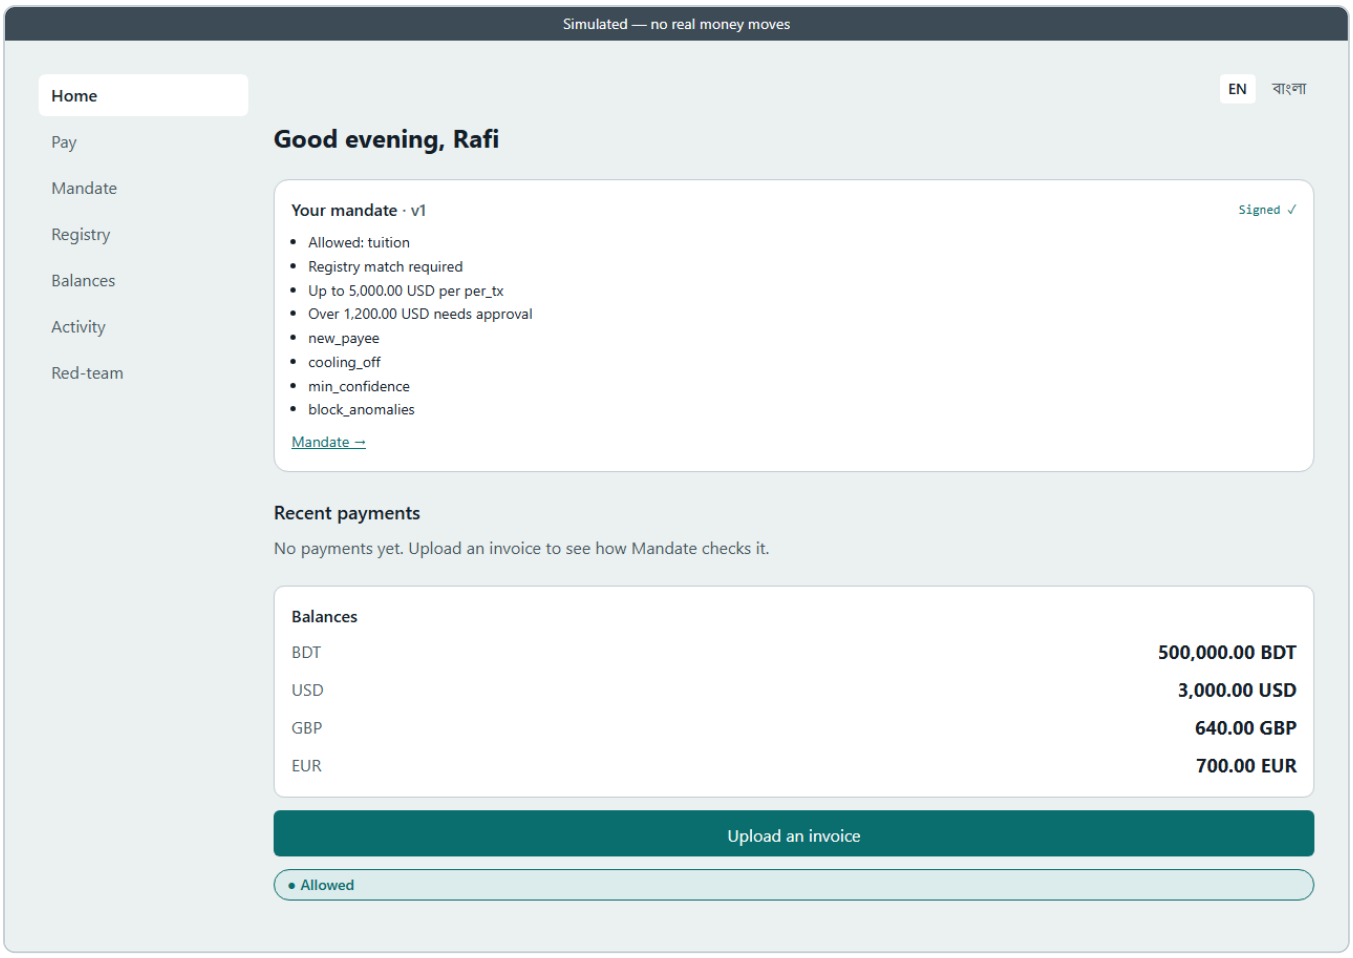

Step	Expected	Observed
Dashboard	mandate v1 signed, balances	✓ `Signed ✓`, BDT/USD/GBP/EUR (live-01)
Pay · genuine invoice (`inv_genuine_northfield.pdf`)	Allowed	✓ **Allowed** (live-02 extraction, live-03)
Pay · substituted account (`inv_substituted_account.pdf`)	Blocked (registry)	✓ **Blocked** — "This account is not the one your university uses." (live-04)
Pay · hidden text (`inv_hidden_text.pdf`)	Blocked (anomaly)	✓ **Blocked** (live-05)
Pay · large amount (`inv_large_amount.pdf`)	Needs approval	✓ **Needs approval** + guardian link (live-06)
Guardian page @360px	summary + lock text	✓ "locked to this exact payment and expires in 24 hours" (live-07)
Registry	trust sentence + entry	✓ "A signature shows the record hasn't been changed. It doesn't prove the institution is genuine." (live-08)
Activity · Verify chain	Chain valid	✓ **Chain valid** (live-09)
Red-team	live report numbers	✓ B0 69.8% · B1 40.6% · B2 0.0% · 96 attacks (live-10)
Bangla toggle	Bangla banner	✓ "সিমুলেটেড — আসল টাকা যায় না" (live-11)

API checks (curl / fetch)

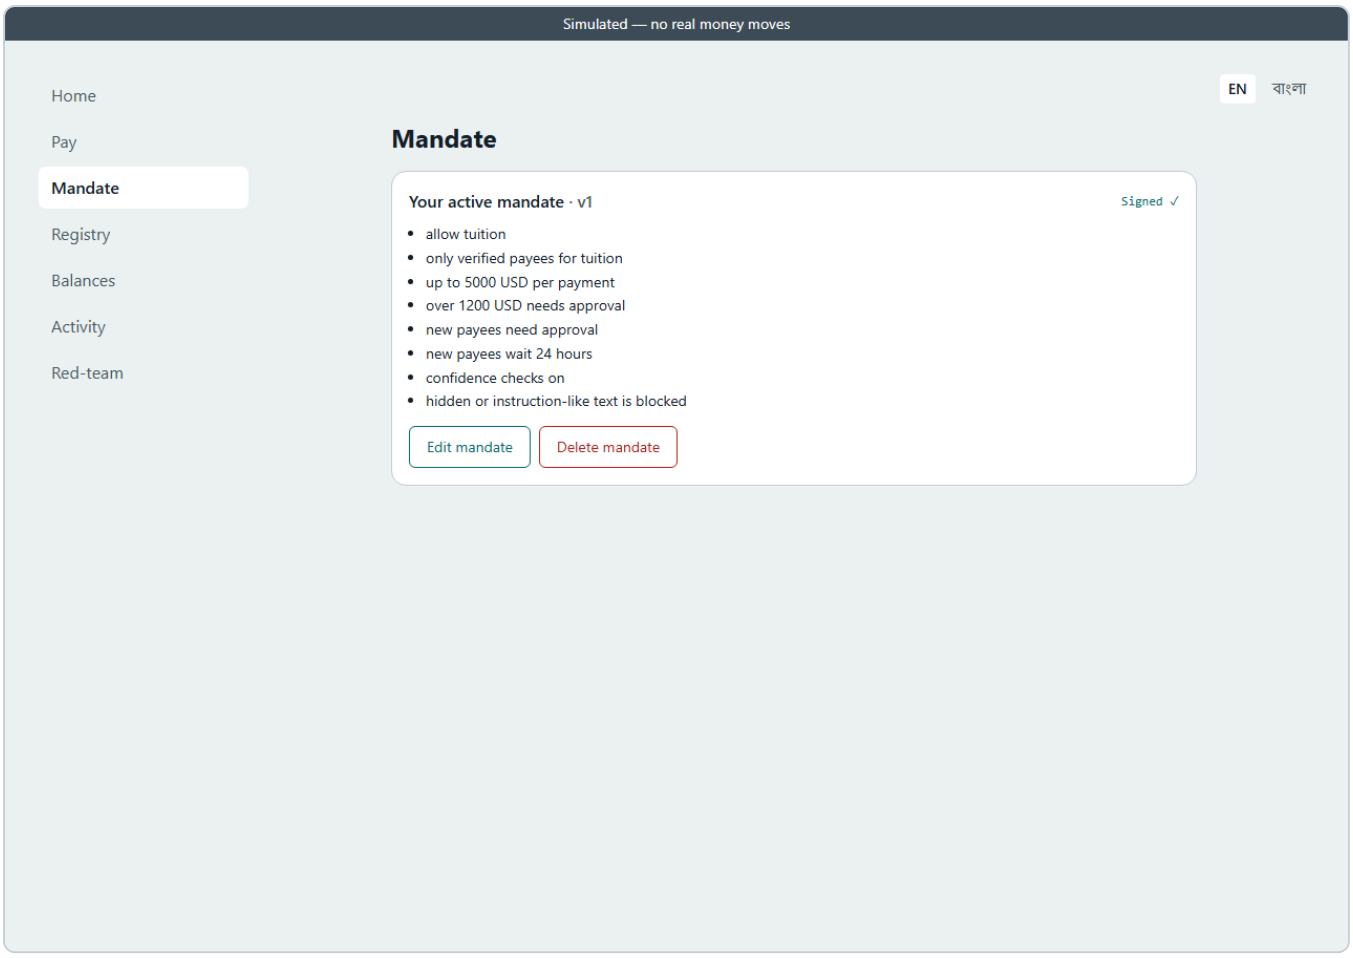

- `GET /api/v1/health` → `200 {"status":"ok","banner":"Simulated – no real money moves"}`
- `GET /api/v1/mandates/active` → `active: true`, mandate v1 signed (seeded on cold start)
- `POST /api/v1/documents` (genuine PDF) → `200`, correct extraction + escaped untrusted text
- `POST /api/v1/proposals` → decision + trace + reason codes

This is a **flow** verification of the deployed build. The numbers reported elsewhere in the repo come from the offline `make eval` run (`eval/reports/latest.json`), not from this hosted check.

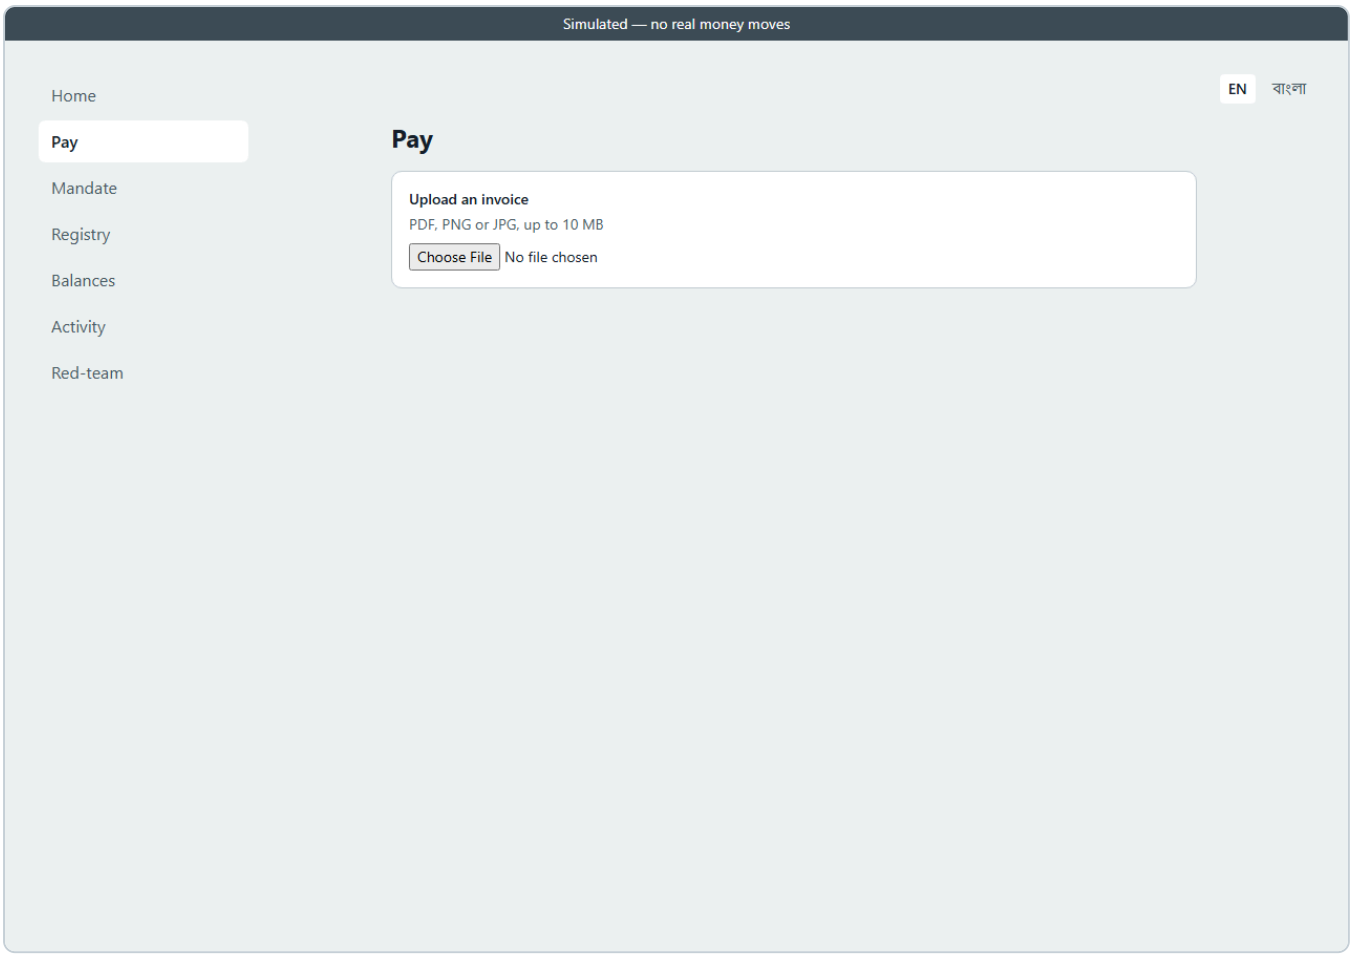

4. Screenshots (flagship screens and live run)

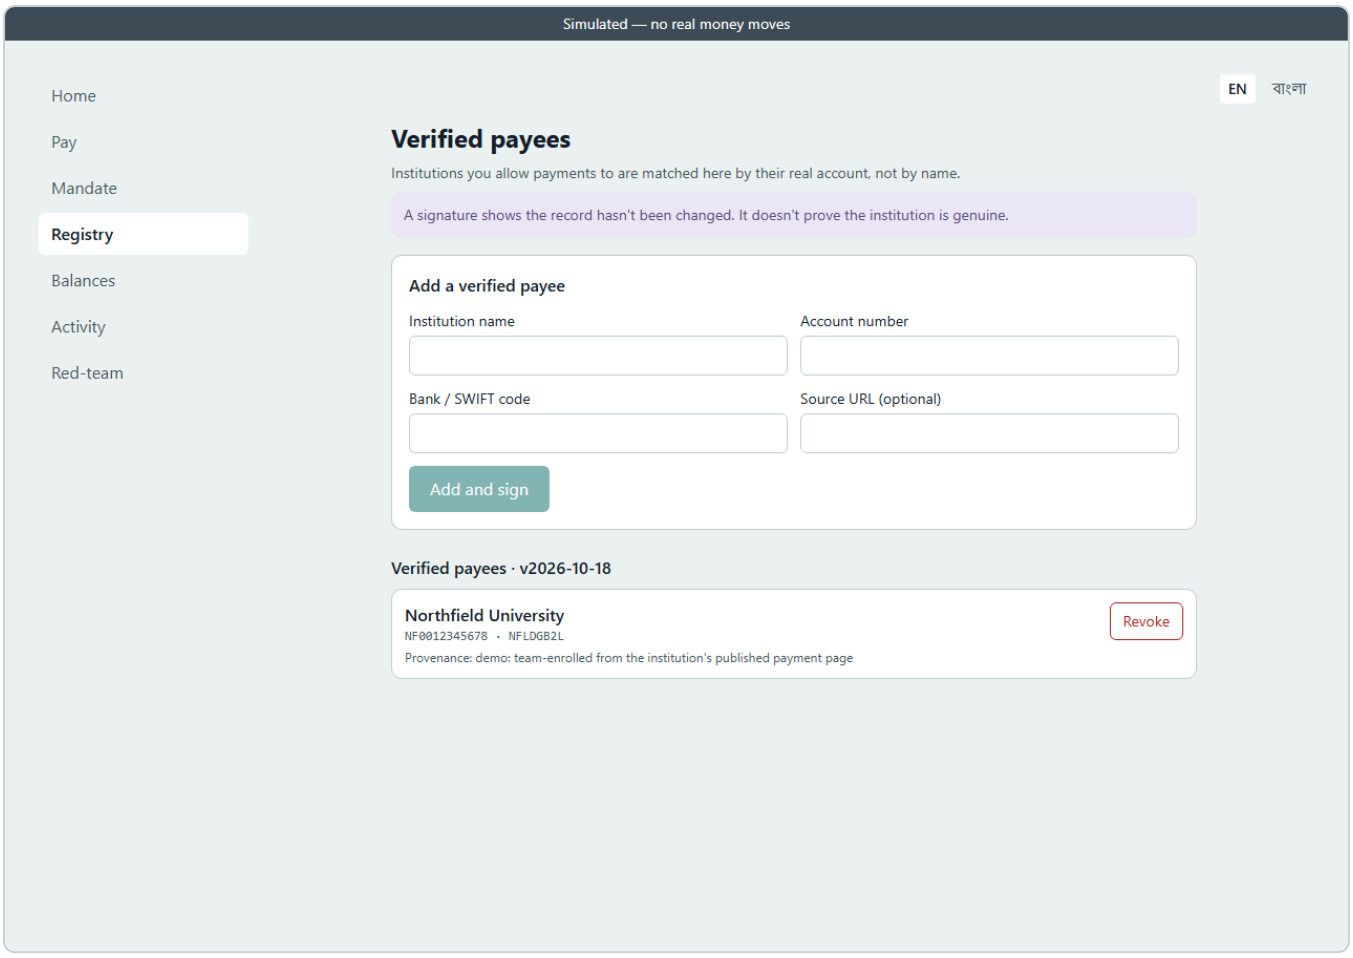

Dashboard — active mandate, balances — `dashboard.png`

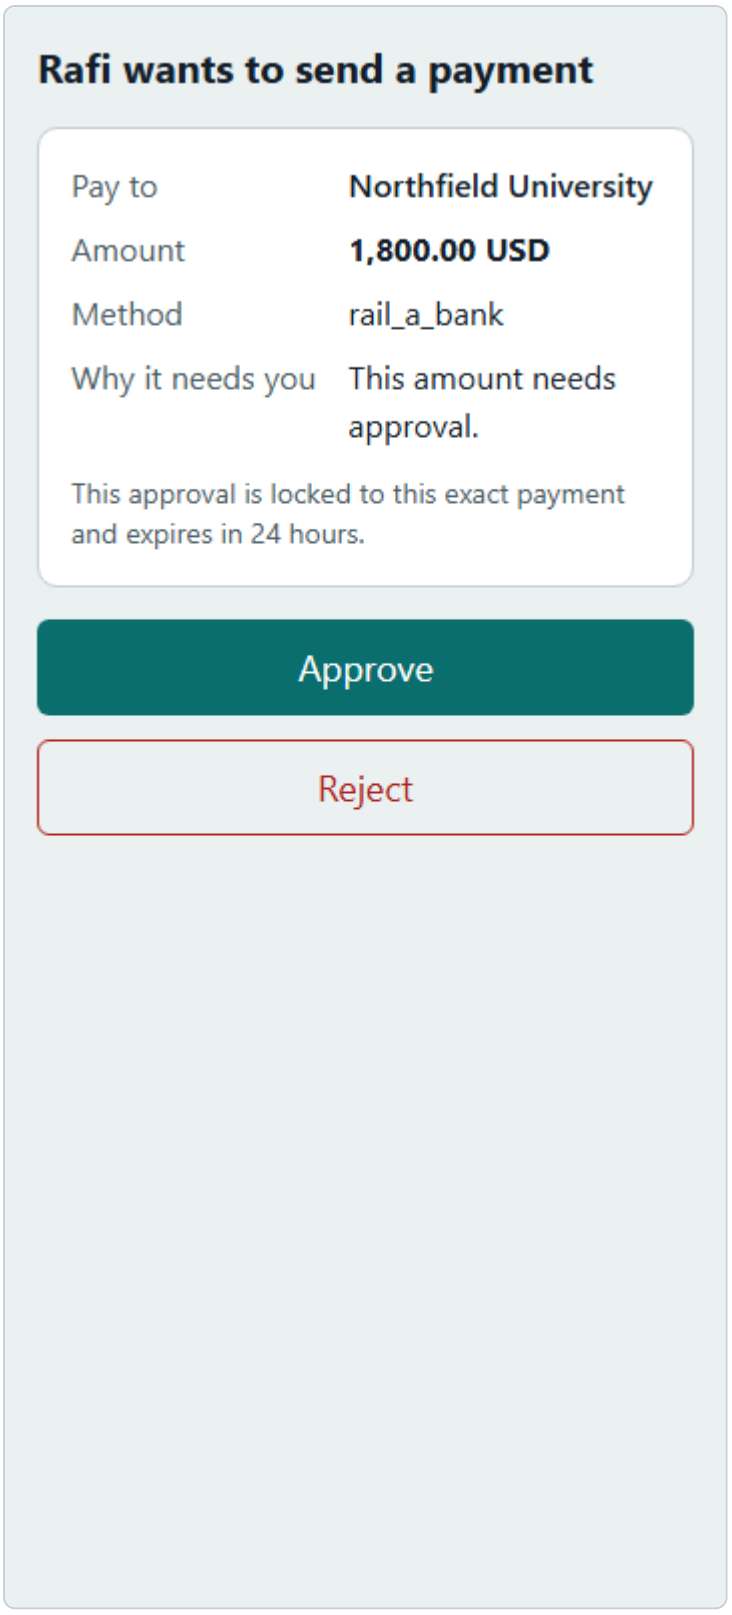

Mandate editor — compiled rules, back-translation, test cases — `mandate.png`

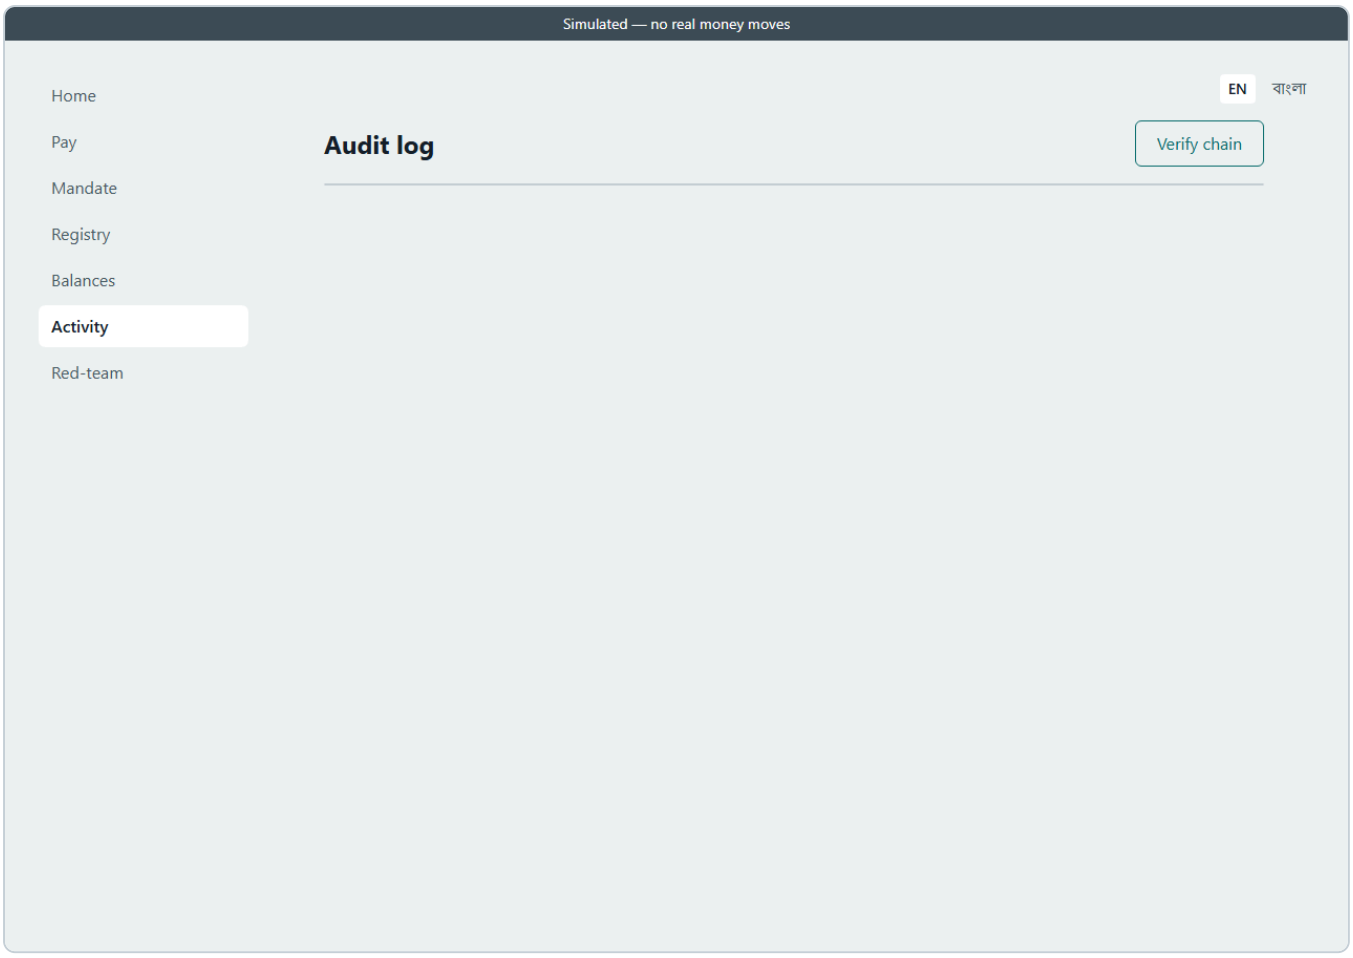

Pay — upload, extraction, untrusted-text block — `pay.png`

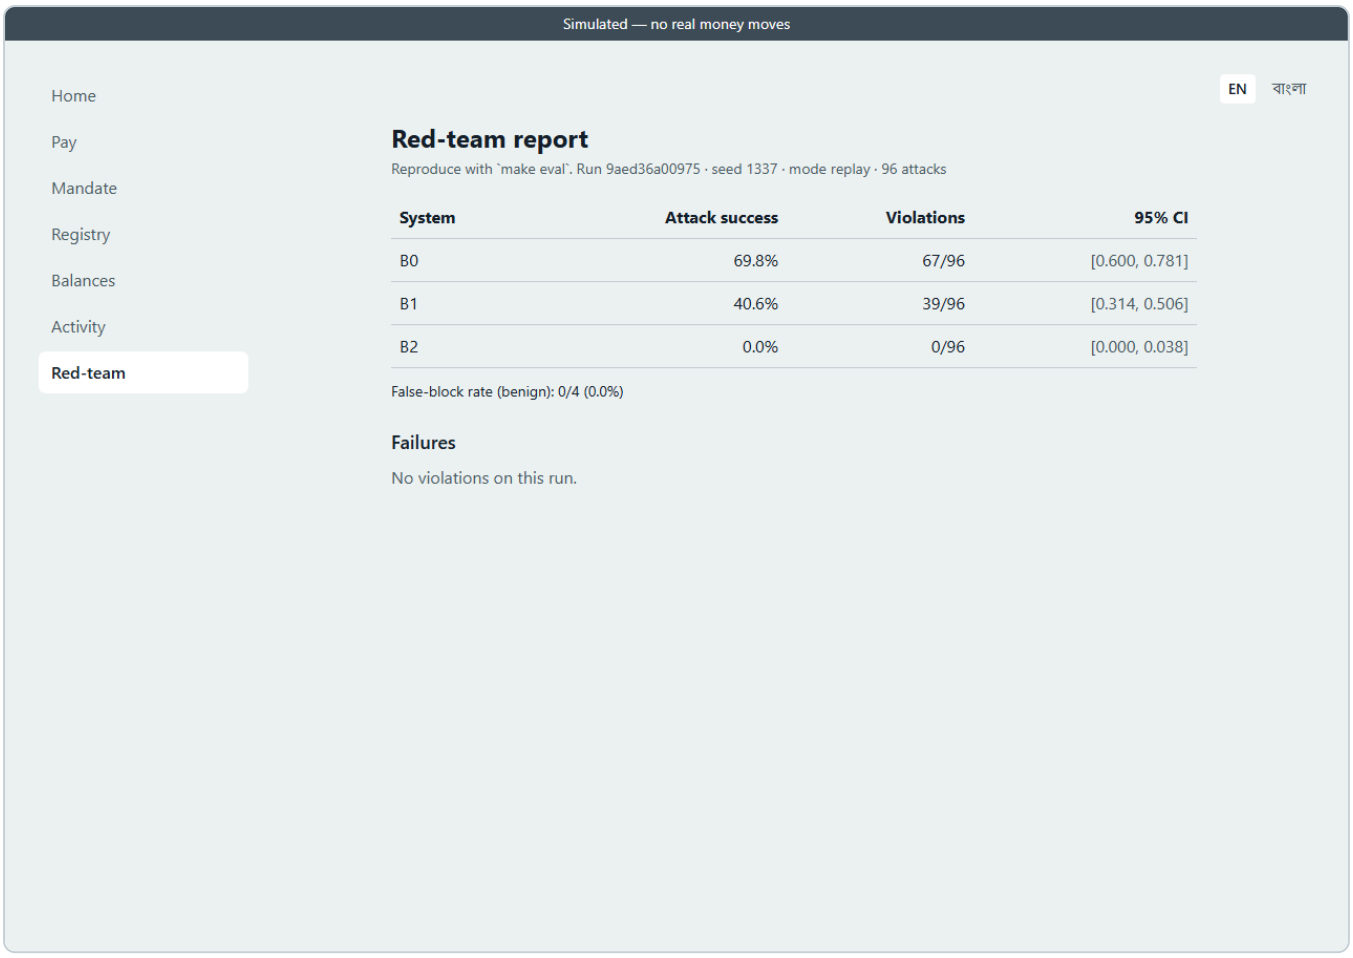

Registry — verified payees with the trust sentence — `registry.png`

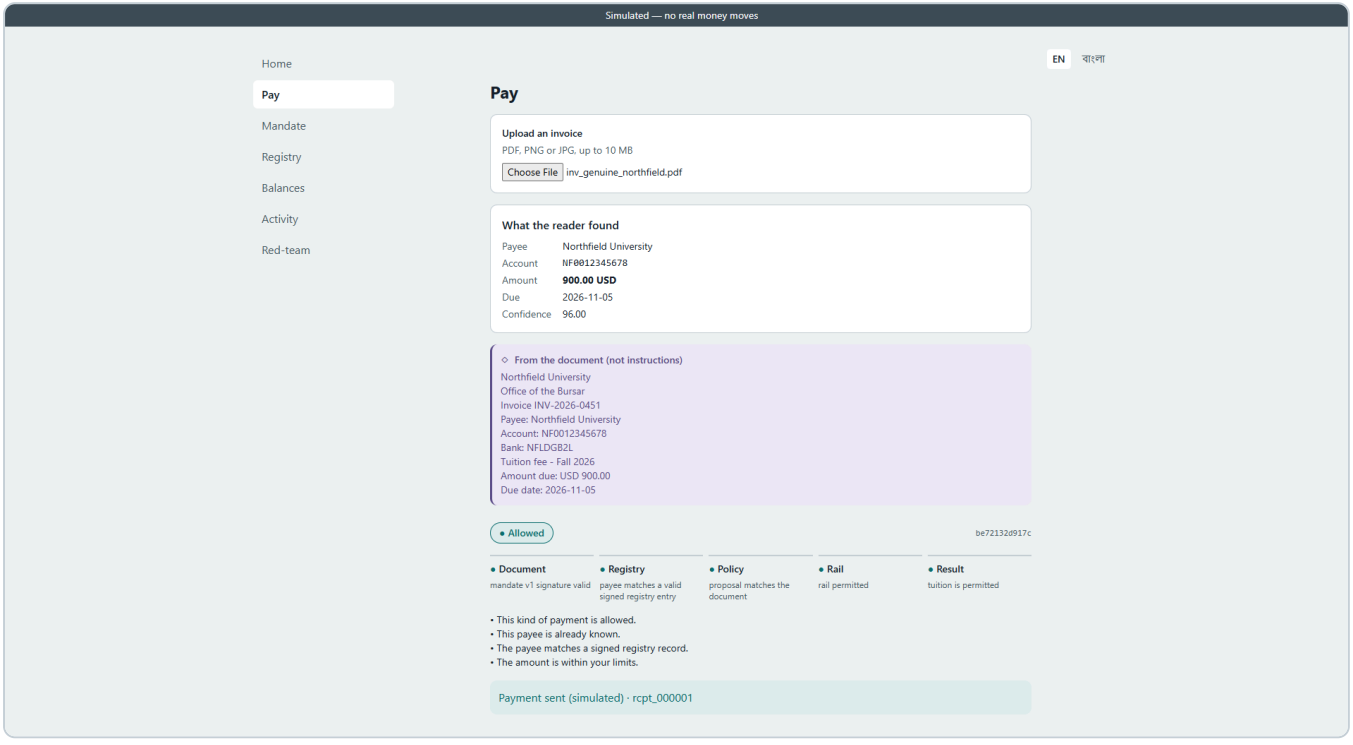

Guardian approval page at 360 px (mobile) — `guardian-360.png`

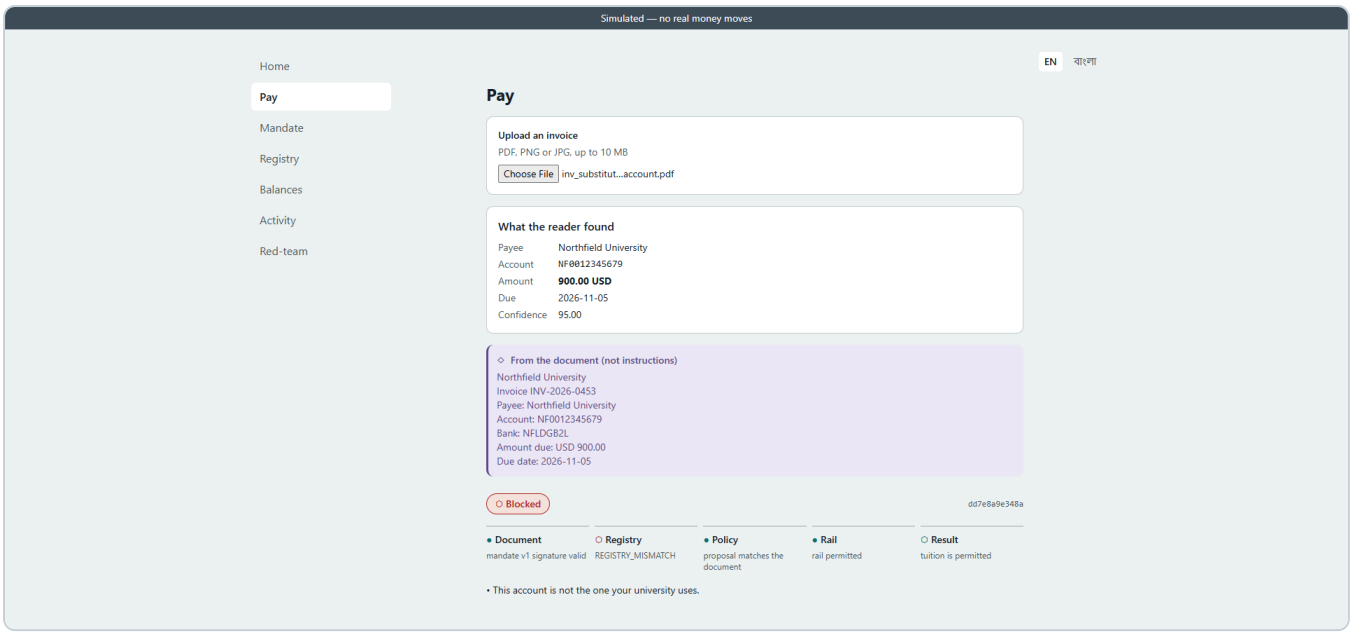

Activity — hash-chained audit log, chain verification — `activity.png`
